### Exchange Status Checker

**Results: Eastham**

**Upgrade Status**  
Status: Green  
**Good News**, BT have finished enabling this exchange for Max DSL products.  
Products will be available from 30/03/06.

BT are in the process of upgrading the majority of telephone exchanges around the UK to support speeds of up to 8Mbit/s.

The status given here is an estimate given by BT on 30/03/06

Many of the exchanges are red and amber at the moment due to the fact that until the main roll out is well commenced BT will not finalise the dates as they want to ensure that any unforeseen issues will not affect dates. We will publish the updated info when and as we get it. The roll out is still fully committed too, as previously commented upon, and the info will be with you as soon as possible.

**Please note:** This checker is not a generic fault tracker. Updates are made as often and as quickly as information becomes available. We display only the information available in the public domain and can't account for it's accuracy.
