Your estimated line speed

If we've done a line check for you, we provide an estimate of the broadband speed that your line should support. Please see above for the "Estimate line speed". We have also included a speed range, as the speed of your service can vary due to the nature of broadband.

If we're unable to provide a line check, we give you the option of continuing without a speed estimate, in which case you'd see the Speed Estimate as "Opted out".

What does "Current line speed" mean?

The speed shown above is based on your sync speed. This is always a little higher than the speed at which data will actually be downloaded over your broadband connection.

Learn more about sync speeds and why broadband speeds vary - [high-speed broadband guide](#).
