### Plusnet Access Control

Use Access Control to set times when specific devices will be prevented from connecting to the Internet. This can be useful if you'd like to control the amount of time your children are online. This means the Plusnet Hub will block all incoming and outgoing traffic to specific devices between the hours you select.

Access Control feature enable:  Yes  No

Select device:  :57

Internet blocked between:  Yes  No

Internet blocked between: 21:00 and 07:00 Permanent

Internet blocked between: 21:00 and 07:00 Add

No Access Control currently selected

Apply Cancel

### My Hub

#### My Services

Internet:	Connected	Disconnect
Broadband username:	gottajet@plusdsl.net	
Plusnet Access Control:	Disabled	Configure

#### My Home Network

Devices currently connected to your Plusnet Hub:

Network	Device	MAC Address	IP Address
2.4 GHz Wireless:	No devices detected		
5 GHz Wireless:	Echo	14:0a:c5:99:39:27	192.168.1.67
	Bono	44:91:60:85:bf:bd	192.168.1.69
	Jesus	e8:d0:fc:b0:20:05	192.168.1.64
Ethernet:	You-view	0c:08:b4:ce:91:89	192.168.1.71
USB:	No devices detected

### Port Forwarding

Port Forwarding is used by devices (e.g. games consoles) and applications (e.g. servers) to make sure that the data coming from the Internet gets to the device that needs to use it. When Port Forwarding is enabled, your Hub will route all inbound traffic for the selected application to the chosen device.

From the list below, first select the application, then the device using the application, then click 'Add' to apply.

If the application you want to use doesn't appear in this list, please go to the Advanced Settings section of your Plusnet Hub Manager, where you'll find more options for Port Forwarding. In the Advanced Settings section, you can also create or change rules for forwarding.

**Game or Application:**  **Device:**
